TECHNICAL PUBLICATIONS

PNR manufactures a complete range of spray nozzles for industrial applications as well as several products and systems specifically designed for industrial processes.

Information about our Company and products are available in the following publications:

PRODUCT RANGE	CTG TV 11 BR
GENERAL PURPOSE SPRAY NOZZLES	CTG UG 18 BR
AIR ASSISTED ATOMIZERS	CTG AZ 18 BR
COMPLEMENTARY PRODUCTS AND ASSEMBLY FITTINGS	CTG AC 18 BR
INDUSTRIAL TANK WASHING SYSTEMS	CTG LS 15 BR
PAPERMILL PRODUCTS	CTG PM 10 BR
EVAPORATIVE COOLING LANCES	CTG LN 16 BR
SPRAY DRYING NOZZLES	CTG SP 10 BR
STEELWORK NOZZLES	CTG SW 11 BR
FIRE FIGHTING PRODUCTS	CTG FF 10 BR

As a result of continuous product improvement our technical publications are regularly updated and automatically mailed to Customers whose address is registered into our Mailing List. (See page 17).

You also find updated Catalogs into our website as shown in the back cover.

NOTES

Our products and their specifications are regularly updated to keep up with the latest stage of technology.

We regret not to be able to give previous advice about these changes to our Customers: please consider data and product specifications as given by the Catalog to be purely indicative and not binding for our Company.

Should your application imperatively require that one or more characteristics of a PNR product is strictly adhered to, we ask you to obtain a written confirmation before sending your Order.

All information in this Catalog, like performance data and product codes, diagrams and photographs, are the exclusive property of Flowtech Srl.

Reproducing any part of this Catalog without the written consent of Flowtech is forbidden.

Dimensions in this Catalog are given in millimeters (mm).

All threads are manufactured according to the ISO 228 standard, except where expressly stated.

(European standards BS 2779 - DIN 259 - UNI 338)

Explanations about the abbreviations used in the Catalog are given at page 17.

Product warranty conditions are given at page 17.

All Trademarks used in the Catalog belong to the respective owners.

Our Company has
qualified its Quality
Management System
according to the ISO
9001/2008 Norms.

DNV
Cert. 04111-99-AQ
MIL SINCERT

Water is used in the paper making process, nozzles directing the water are used in preparing pulp paste, side cutting, felt washing and many other areas. Due to the many diverse paper making processes, PNR has developed highly specialized nozzles for each process.

PNR has put to work its long experience in the field of fluid dynamics to produce a range of professional papermill equipment and accessories, which has been proven through many years of successful applications, but is continuously updated to the most modern technical levels and to the specific needs of our Clients.

Our papermill product range includes a wide variety of high quality shower nozzles, feature-packed shower oscillator, and a variety of products for additional applications in the plant, including a range of state-of-the-art cooling lances and pressure nozzles for pollution control in pulp making plants.

PNR MATERIALS CODES

Many of the products shown in this Catalogue are available in different materials, and therefore their identification code is not complete, the two last digits in the code normally used to specify the material.

Replace the XX with one of the material codes listed below.

In such cases please complete the code for your product with the final digits showing the required material.

The coding for the most popular materials are listed in the following. The complete list for the PNR material codes can be obtained requiring our publication 3BZ A011.

A1	Mild steel	E31	Acetalic resin (POM)
A2	High speed steel	E7	Viton
A8	Zinc coated steel	E8	Synthetic rubber (NBR)
A9	Nickel coated steel	F5	Ceramic
B1	AISI 303 Stainless steel	F31	Ruby insert, 316 body
B2	AISI 304 Stainless steel	G1	Cast iron
B3	AISI 316 Stainless steel	H1	Titanium
B31	AISI 316 L Stainless steel	L1	Monel 400
C2	AISI 416 Stainless steel, hardened	L2	Incolloy 825
C7	AISI 316 Ti Stainless steel	L8	Hastelloy
D1	Polyvinylchloride (PVC)	P6	Acr. but. styrene (ABS)
D2	Polypropylene (PP)	P8	EPDM 40 Shore
D3	Polyamide (PA)	T1	Brass
D5	Talcum filled Polypropylene	T2	Brass, chrome plated
D6	Glassfibre reinforced PP	T3	Copper
D7	High density polyethylene	T5	Bronze
D8	Polyvinylidene fluoride (PVDF)	T8	Brass, nickel plated
E0	EPDM	T81	Brass, electroless nickel plated
E1	Polytetrafluorethylene (PTFE)	V1	Aluminum
E2	PTFE (25% glassfibers)	V7	Aluminum, electroless n. plated

SHOWER PRODUCTS

Felt and fabric cleaning is one of the most common applications for shower headers, but many additional jobs can be performed.

Examples are: for cleaning suction and grooved rolls, for paper formation, for remoisturizing, for trimming paper web and for lubrication...

All these operations heavily influence the product quality ...which requires high quality and properly designed nozzles.

Page 3

THREADED SHOWER NOZZLES

Needle jet nozzles, High impact straight jet nozzles, Short flat jets..all the industry standards are available in the high quality you require.

Page 5

SELF CLEANING NOZZLES

Needle jet nozzles, High impact straight jet nozzles, short flat fan jets. All the popular designs available in the high quality you require.

Page 6

NOZZLES FOR SELF CLEANING SHOWERS

Our unique disc-type nozzles for internal brush showers are manufactured with a patented design orifice, offering longer life plus increased efficiency.

Page 7

SHOWER OSCILLATING MOTOR

State of the art technology, full electronic control, low-voltage stepper motor, water-tight construction: all the best features a paper maker can think about are built into this oscillator.

SHORT FLAT FAN JET NOZZLES

GC

For limited space applications the GC type nozzles offer flush mounting and excellent performance. Their special inside profile produces a very effective, sharp flat fan jet with a round orifice, minimizing clogging.

Materials **B1** AISI 303 Stainless steel
 B31 AISI 316 Stainless steel (on request)

GC nozzles are also available, on request, with no thread for weld assembly

NEEDLE JET NOZZLES

GD

A classic high impact needle jet nozzle, for cleaning and washing felts. High quality machining assures a perfect straight jet orifice, with smooth inside surface for superior solid stream performance. The nozzle design, with the orifice inlet in a higher position, minimizes the possibility of nozzle clogging. Different body lengths provide for increased clogging protection when larger pipes are used. Longer wear life can be obtained by means of a ruby orifice insert.

See note on complete nozzle code for body length and connection thread.

Materials Body **B31** AISI 316L Stainless steel
 Insert **F31** Ruby insert, 316L body

HT

QUICK CONNECT NOZZLES

HT

Quick connect nozzles offer the convenience of a fast and straightforward replacement, while keeping the original spray alignment. Nozzle tips are assembled onto bodies with thread or weld connections, each body being provided with a water-tight rubber (standard) or viton seal.

Materials Tip & Body **B31** 316L Stainless steel
 Seal **T1** Brass
E0 Synthetic rubber
E7 Viton

Please ask for our **Data Sheet 9795** for further details and performance charts,

QUICK-CONNECT NIPPLES

Quick connect nipples are available in a variety of two sizes and male threads ranging from 1/4" to 1/2", each nipple coming complete with seal.

SELF CLEANING NOZZLES

GF

The GF nozzle design helps to greatly reduce shower maintenance requirements. The nozzle body contains a mobile piston that will retract, purging the nozzle orifice when the line feed pressure is reduced. Secured by means of a locknut to nipples welded onto the shower bar, these are available with needle jet or flat fan spray patterns. Self-cleaning nozzles allow for easy installation and alignment.

GF nozzles are supplied with different thread types, as shown in the table below, and therefore their product code is to be completed with the two final digits showing the thread style required.

Materials Nozzle **B31** AISI 316L Stainless steel
 Spring **N1** AISI 302 Stainless steel

**GF**

RUBY ORIFICE

To assure longer operation life GE nozzles can be supplied with a ruby orifice fitted into a machined body, for straight jet types only and with material codes as stated above.

GE

These nozzles have been designed to produce a sharp, high impact flat fan jet, and with a large orifice clogging is minimized. The nozzle body is manufactured by a stainless steel sheet stamping process, and the orifice profile is obtained by high precision machining.

Our patented orifice profile provides basic advantages over any other nozzle:

- Because of our machining technology all nozzles are burr free.
- All nozzles have zero tolerance on capacity, as well as a perfect water blade.
- The orifice profile has a radius instead of a sharp change of direction at the sides, hence turbulence points are minimized and a more streamlined water blade is produced.
- The profile design allows for a uniform steel sheet thickness around the orifice, which means our nozzles will outlast the competition.

Materials

C7 AISI 316 Ti Stainless steel

F31 Ruby insert on 316 body (straight jet nozzles only)

Code	D1	Water capacity at different pressures (lpm) (bar)

PATENTED ORIFICE PROFILE

This special orifice profile, developed in our laboratories, is a major advance in the process of felt cleaning.

International patents applied for.

SHOWER PIPES

We supply fixed or oscillating complete shower headers, fitted with our high quality GE type nozzles assembled by means of specially designed self orientating nipple and safety locknut. The highest quality materials and workmanship assure for a long and satisfactory service. Please ask for our Data Collection Form.

OSCILLATING MOTOR

UFX

While the job of removing the cellulose fibers is actually made from the water jets, a high quality shower oscillator must assure some prerequisites to perform satisfactorily. With features such as oscillator speed proportional to paper machine, constant speed trough felt width, and minimal dwell time, our shower oscillator is a valuable component of the felt cleaning process.

Designed with a sturdy construction, sophisticated electronic control and the high technology drive system based on a preloaded ball screw, our oscillators offer an exact and precise movement, with no mechanical play and minimal backlash. The oscillator is built to a IP 65 protection grade, and the inner volume is kept under higher than ambient pressure, which keeps the inside parts in perfect working conditions for maximum reliability even under the worse conditions.

Push / Pull force	5000	N
Span	200	mm
Maximum speed	10	mm per second
Temperature range	0-50	°C
Inside air pressure	0,3	bar

Material Body B31 Aisi 316L Stainless steel

**AUTOMATIC DRIVE**

The high quality electronic control of the oscillator can be operated in manual mode, or automatically driven using a speed signal provided by the paper machine. Either way, the internal microprocessor controls the shower motion based on the four basic parameters, felt length, speed, twist and nozzle pitch. A standard RS 232 port allows for monitoring the shower operation from a remote location.

An emergency stop is provided, as requested from EN 60204.

Feed	220	V - 50 Hz
Unit power	250	VA

OTHER PAPERMILL PRODUCTS

Page 9

PAPERWEB TRIMMERS

Sharp, straight water jets are produced by these specially designed nozzles, to precisely trim the sides of a paperweb. All trimmers are available with brass body and tip, and with a stainless steel filter on the feed side. Orifices available with ruby insert, or hardened stainless steel.

Page 10

AIR ASSISTED ATOMIZERS

Pre-wet your press section with these high quality air assisted atomizers, producing a finely atomized flat fan jet spray pattern. See our Catalog CTG AZ15 BR for a complete product range, special types and accessories.

Page 11

AIR BLOWING NOZZLES

For blow-off applications, we offer models producing a flat, sharp air curtain up to 600 mm width. Available in high quality plastic materials or aluminum, see specification.

Page 12

BASIS WEIGHT VALVE

A very delicate and important part in every paper making machine. Our valves have passed the 'real world' test, working satisfactorily for years under harsh papermill conditions.

PAPER WEB TRIMMERS

GM

These nozzles provide a glass-rod like, sharp needle jet which cuts the side of your paper web in a sharp and clean profile. The brass nozzle body is fitted with a large surface stainless steel filter cartridge, for long operation before service is required. The brass nozzle tip contains a high quality orifice insert (Ruby or Hardened SS) for extended life at high pressure.

Materials

- Body and tip **B3** AISI 316 Stainless steel
- T1** Brass
- Orifice **C1** 420 Aisi Stainless steel, hardened
- F31** Ruby insert, on 316L body
- F5** Ceramic insert, on 316L body

ADDITIONAL MILL APPLICATIONS

AIR ASSISTED ATOMIZERS

WH = Water capacity (lph)
AM = Air capacity (Nml/min)

MW

MW air assisted atomizers provide an ultra fine atomized spray, in a wide range of capacities, spray angles and spray patterns. Commonly used for such applications as paper remosturizing, paper coating, lubrication and humidification. See our Air Atomizers Catalog CTG AZ18 BR for our complete product range.

UMQ

Our control cabinets are simple, cost convenient solution for the fine tuning of your humidification system, and are delivered complete with all the equipment necessary for precise system control. See full specification in Catalog CTG AZ18 BR

Code	L	AA	AC
UMQ AA01 V0	1/4"	3/8"	1/4"
UMQ AA02 V0	3/8"	1/2"	1/4"
UMQ AB01 V0	1/4"	3/8"	*
UMQ AB02 V0	3/8"	1/2"	*

- L = Water inlet
- AA = Atomizing air
- AC = Cylinder drive air
- * These cabinets have one air line only

ADDITIONAL MILL APPLICATIONS

BLOW OFF AIR NOZZLES

UEA 0525

These air blowers have been designed for applications where a flat blade-shaped air stream, with high specific impact must cover a given width on a moving conveyor. Here again the outside profile obtains a strong entrainment action over the surrounding atmosphere, generating an high impact air blade, and avoiding the highly turbulent conditions of a free air jet with consequent loss of energy and high noise.

UEB

UEB blowers produce a laminar jet of compressed air, with high efficiency and limited noise level. Their unique design provides an air stream exiting from a protected position, and changing direction because of adherence to a radiused profile thanks to the Coanda effect.

Their design allows for remarkable advantages:

- The exit orifice is not exposed to the risk of being damaged by impact.
- The bar can be built on any desired length, up to 600 mm.

- Materials**
- Body **V7** Electroless nickel plated aluminum
 - Upper Plate **A9** Nickel plated steel

ADDITIONAL MILL APPLICATIONS

BASIS WEIGHT VALVE

UX

This critical valve must precisely adjust the pulp quantity which enters the machine, controlling the paper weight. The automatic adjustment mechanism of this component needs to be designed with extreme care, since the high precision required on very fine adjustment must not be affected by any mechanical play.

Our system, based on a globe valve driven by an electrical stepper motor through a ball screw drive, eliminates the danger of mechanical play, and assures precise valve settings independent from the value of the resisting torque.

The flow through the valve varies as a linear function of the opening angle (0° to 90°).

The electronic control cabinet matches the high quality of the valve itself, and offers the following:

- Local or Remote valve control
- Adjustment speed is variable, can be set slow for remote control, or fast for manual control.
- High precision automatic weight control.

ADDITIONAL PRODUCTS

TANK WASHING AND PLANT CLEANING

See our Industrial Tank Washing catalog CTG LS15 BR for our complete product range, working with low and high pressures, and find the ideal product for chest or bleach tower cleaning in the pulp mill, or cleaning the head box in a paper machine. Our cleaning guns and hose reels also help to keep your plant clean. Our eductors are a professional solution to keep vats agitated.

ADDITIONAL PRODUCTS

Simplify installation while improving the look and effectiveness of your system with PNR professional assembly accessories, use our nozzles for your pollution control system. A number of problem solving products in several points of your plant.

ADDITIONAL MILL APPLICATIONS

TANK CLEANING NOZZLES

UB

We make available one of the widest range of tank washing nozzles and rotating heads in the industry.

Our tankwashers are typically used for such applications as chest or bleach tower cleaning in the pulp mill, or cleaning the head box in a paper machine.

Please refer to our Catalog CTG LS15 BR for complete information.

PIPE CLEANING

UC

UC nozzles produce high pressure liquid jets backwards and are used for internal pipe cleaning in a number of papermill systems.

The job is performed quite efficiently, since the washing liquid being ejected backwards takes along and expels from the pipe the dirty particles which have been detached from the pipe wall.

Normally supplied in stainless steel, or in hardened stainless steel where very high pressure and/or long lasting jobs are necessary.

More details from our Data Sheet 9043.

MILL CLEAN UP

UMV

The UMV washgun is a well proven ergonomic design, and allows for fast and efficient washing of machines and plant areas while keeping the hot water consumption under control.

Outer body is made out of brass or stainless steel with inside parts in stainless steel.

The jet cone spray can be varied from straight jet to full cone spray to adjust for different jobs, and the trigger is easily locked open for more comfortable operation.

The sturdy rubber lining assures protection from hot water temperature and avoids damages if the gun is falling to ground.

The gun can be fed through an independent hose, or by means of one of our hose reels as shown at page 15.

See our catalog CTG AC18 BR for full details and accessories list.

XUM P050 E0
25 METER 1/2" HOSE

XUM S010 B3
HOSE STAND AISI 316

HOSE REELS

UMU

Our UMU hose reels have been designed for industrial environment and offer both the advantage of allowing fast and easy cleaning jobs, and the convenience of avoiding the danger of hoses left loose on the floor that can cause an accident.

Completely built in stainless steel to avoid rust and corrosion in the harsh papermill environment.

The range includes, in addition to standard reels, the following options

reels with automatic hose return,

reels with orientable outlet

reels with extra capacity when very long hoses are required.

The most convenient type for any requirement is then available, with fast delivery times and the best quality on the market.

VENTURI EDUCTORS

UP

Our Venturi eductors serve the purpose of agitating, mixing, and dissolving powders within round and square vats .

Eductors made in stainless steel can also be used for the purpose of eating liquids with steam.

Complete technical information in our Complementary Products Catalog CTG AC18 BR.

ADDITIONAL PRODUCTS

LINE FILTERS

VEM

A wide range of line filters is shown in our Accessories Catalog CTG AC15 BR, for capacities ranging up to 1050 lpm. Their strong aluminum body and the large surface cartridge assure long operation times even in very hard industrial environment. Cleaning the filter is easily performed either getting out the trapped dirt through the outlet port at the bottom of the filter bowl or unscrewing the entire bowl without any tool being required.

BALL FITTINGS

ZR

Three models of ball fittings allow for convenient nozzle orientation, sizes ranging from 1/8" to 2 1/2", manufactured in brass or stainless steel. See our catalog CTG AC18 BR for full specification.

ASSEMBLY CLAMPS

ZP

The easiest and fastest way to assemble nozzle onto a shower header, without threading or welding. The assembly only requires drilling a hole into the pipe. Great for replacing nozzles on a stripped thread location.

POLLUTION CONTROL NOZZLES

Our nozzles catalog shows several full cone, hollow cone and spiral nozzles, which assure the highest resistance to plugging, and the added feature of self-drainage to reduce chemical build-up. Capacities up to 500 lpm, spray angles up to 120° and the choice between full cone and hollow cone spray pattern allow for optimal scrubber design. Several types of stainless steel and superalloys available.

AIR ASSISTED LANCES

We offer a full range of high quality air assisted atomization lances to be used for evaporative cooling systems, with a wide choice of stainless steel or other special alloys. See our Evaporative Cooling Catalog CTG LN15 BR for full details.

PRODUCT WARRANTY

PNR products shall be replaced or repaired, as deemed convenient by the Company, if found defective in manufacturing, marking or packing. Above warranty conditions shall apply if notice of defect is received from PNR within 30 days from date of product installation, or within one year from date of shipment.

The cost of above said replacement or repair as above specified shall be the exclusive remedy for any breach of any warranty and PNR shall not be held liable for any damage due to personal injuries or commercial losses coming from product malfunction.

PNR desires to handle warranty returns avoiding mistakes and giving Customers the best possible service.

Therefore we have organized a Company procedure with the following steps to be followed :

- 1 Contact PNR Quality Manager to obtain a RIN (return identification number) and a 3DA A04 Form.
- 2 Fill the Form 3DA A04 as required, including RIN number and include into material shipment
- 3 Pnr shall repair or replace the product as appropriate, and return it together with a copy of our internal inspection Report.

PNR wishes to obtain complete Customer satisfaction, and all our personnel has been instructed in order to make available, in such an event, a perfect product in the shortest possible time.

OTHER PRODUCT RETURNS

Receiving returned products not precisely identified can originate delays in handling the single cases and even some product losses. In order to avoid such problems please follow the PNR procedures as described below.

PRODUCTS DELIVERED ERRONEOUSLY BY PNR

- 1 Obtain from PNR a RIN (Return ident number) and a 3DA A04 Form.
- 2 Return products to PNR including the 3DA A04 Form properly filled including RIN number.
- 3 PNR shall issue a Credit Note payable to you including product and all transport cost.

PRODUCTS ORDERED ERRONEOUSLY TO PNR

- 1 Returned products will only be accepted if in new original condition and properly packed.
- 2 Obtain from PNR a RIN (Return ident number) and a 3DA A04 Form.
- 3 Return products to PNR including the 3DA A04 Form properly filled including RIN number.
- 4 A 10% inspection and re-stocking charge and all transport cost are at charge of Customer.
- 5 A Credit note for the proper amount shall be issued and paid.

SPECIAL NON CATALOG PRODUCTS

The return of these products is only possible after PNR has issued an offer for purchase.

DISCLAIMER

Our products are manufactured with the best care and according to the latest developments of the technology, but we cannot assure that every one of our products is perfectly fit for any possible specific process.

The information provided in this Catalog is provided "as it is" and we make no warranty of any kind with respect to the subject matter or accuracy of the information contained herein. This publication may include technical inaccuracies or typographical errors and changes may be periodically made to the information herein without previous notice.

SENDING LIST

In order to automatically receive updates of our technical Documentation please photocopy this card and send it to us inside a sealed envelope, your details shall be kept on our Permanent Mailing List.
